

1 ABSTRACT

2

3 A method for providing network management using a remote device. The method may

4 include receiving an end-user message from an end-user device configured to communicate with

5 a network management tool and processing the received message to perform a network

6 management function on at least one network component. The end-user device may include one

7 of a plurality of wireless devices, and the network management tool is configurable to

8 communicate with any of the plurality of wireless devices.
